

YOUR PARTNER FOR A HEALTHY HOME

LUX AEROGUARD **MINI**

SINCE 1901

Breathing: we do it automatically. But the air that gives us life also carries pollutants and allergens like pollen, dust and spores, that can be dangerous for our health. With the Lux AEROGUARD MINI, the world's most compact high performance air purifier designed in Switzerland, Lux offers you the solution for healthy indoor air at home and at work. You can breath again!

The Lux AEROGUARD MINI 5 stage filtration system

- 1 STAGE 1 - PRE-FILTER**
 The pre-filter removes the largest particles such as hair and fibres. It is washable and can be replaced easily.
- 2 STAGE 2 - HEPA H13 FILTER**
 Thanks to its efficient particle absorption, the HEPA H13 filter removes 99.95% of house- and fine dust, pollen and spores.
- 3 STAGE 3 - PAVED CARBON FILTER**
 The carbon filter removes gas and both organic and chemical odours like tobacco and food odours.
- 4 STAGE 4 - TITANIUM OXID COATING with UV-LEDs**
 Thanks to the UV LEDs, which activate the titanium oxid layer, this filtration stage reduces bacterias and viruses.
- 5 STAGE 5 - IONISER**
 The ioniser releases negative ions. These bond with the positively charged pollution particles in the air which then become heavier and fall down to the floor where they can easily be vacuumed. The result is a fresher, energized room environment.

TECHNICAL DATA

Height	480 mm
Depth	260 mm
Weight	4.2 kg
Power Consumption Speed 1/2/3	5/8/22 Watt
Rated Room Size	14 m ²
